

## Download and Install instructions for Apollo Scripts for TRAMS.

Go to the web site at [www.shelleyconsulting.com](http://www.shelleyconsulting.com). Find a link that says [Download](#) and click that. You will be prompted for a user name and password. Enter the user name and password given to you by Shelley Consulting. You will see another screen with a link that says [Apollo\\_Scripts](#), click that and you will be on the Apollo Scripts Download Page. During the download and install process, wherever there is a password required, you will be given that password by Bill Shelley.

On the left side will be 2 links to files to download, and on the right will be 3 links. The order that they are downloaded does NOT matter, but the order they are installed DOES matter.

It is recommended that you download all of the files on the Apollo workstation in your office designated as WS1. The files should be saved to the **c:\fp\datadir** folder on that machine.

### Downloading

If you already have the Scriptwriter Plus program, skip to Step 3.

- Step 1. Download the Scriptwriter Plus Run file.
- Step 2. Download the Apollo SW Plus Std Library file.
- Step 3. Download the Apollo Scripts for TRAMS file.
- Step 4. Download the Apollo Workstation Update file.

*It is **not** necessary to download the Apollo Scripts Ver. XXXX Update Only file. It will be the file you will download later to get future updates.*

These are install files, and 2 of them are compressed files. Once they are downloaded, you must install them in the order listed above in the download steps.

### Unzipping

- Step 1. Double click the **swprun.exe** file to unzip the installation files for the Scriptwriter Plus run program.
- Step 2. Double click the **stdlib.exe** file to unzip the setuplib.exe file for installing the Apollo Standard Script Library file.

Once these two files are unzipped, you are ready to install.

### Installing

- Step 1. Double click the **setup.exe** file in the **c:\fp\datadir** folder. This will install the Scriptwriter Plus program. Accept all the default locations during the install.
- Step 2. Double click the **setuplib.exe** file to install the Apollo Standard Script Library files. Again, just accept all the defaults during the install.
- Step 3. Double click the **scripts.exe** file to install the Apollo Scripts for TRAMS files.
- Step 4. Double click the **setupupd.exe** file to install the Workstation update program.

**NOTE: Step 4 is NOT performed on the WS1 workstation, only on the other Apollo workstations.**

To install the scripts in the other workstations, the installation steps are the same, but you will perform them at each workstation from the **G:** drive. The **G:** drive on the workstations is the same as the **c:\fp\datadir** folder on the WS1 workstation. If you do not have a **G:** drive on the workstations, you will have to map a **G:** drive to the WS1 computer. Below are the steps to map the **G:** drive to the proper computer. When looking for the setup files on the **G:** drive, they will be in the root directory (**G:\**) and not in **g:\fp\datadir**.

## Sharing

- Step 1. Go to the WS1 workstation, or the one you have designated as the "main" computer.
- Step 2. Double click on My Computer.
- Step 3. Double click on the C: drive.
- Step 4. Double click on the FP folder
- Step 5. Right click on the DATADIR folder.
- Step 6. Click on item named "Sharing".
- Step 7. Click on Share As and leave the Share Name as DATADIR.
- Step 8. Click on Full in the Access Type and leave the password blank.
- Step 9. Click OK. A hand should appear under the DATADIR folder.
- Step 10. Close all windows opened during this process.

## Mapping

- Step 1. Double click on Network Neighborhood
- Step 2. Double click on the computer named WS 1 (or your "main" workstation)
- Step 3. Right-click on the "DATADIR" folder and then click on the "Map Network Drive" item.
- Step 4. On the Drive line, drop the down arrow at the right end of the line down and scroll to the G: drive.
- Step 5. Make sure the "Reconnect at Logon" check box is checked and click OK.
- Step 6. Close any drive or folder windows that have opened.
- Step 7. Double click on "My Computer" and find the G drive. [It may say Datadir on WS1 (G:)]
- Step 8. You should see the install files mentioned in Installing. Follow the steps to install on each workstation.

## Creating Window and Icon

- Step 1. Type Alt-R to open the Scriptwriter Plus screen. You should see a blank gray screen.
- Step 2. Click Window and then click New Window.
- Step 3. In Window Title, Type Trams
- Step 4. Click drop down arrow under Host and select Focalpoint Apollo. Then Click OK.
- Step 5. You should have a blank white screen. Click File, and Add Icon.
- Step 6. In description type Apollo Scripts for Trams.
- Step 7. Click Browse. Select Trams.key from the List. Click OK.

You will also need a license file that will be given to you separately that needs to be installed on each workstation. Instructions for that will accompany the license file.

After installing and adding the license file, there will be some setup in Apollo to create 3 profiles which the scripts will use. The instructions for this set up are in a separate document.
